

# AYUSH Manufacturing Practices & Regulatory Compliance

Use this pack while completing the guided lesson. It combines concise notes, practice questions and a record of your applied learning.

## 1. Lesson notes

**Focus:** GMP controls, batch documentation and release readiness.

**How to use the lesson:** identify the approved workflow, record the safety or quality checkpoint, and state when a mentor or supervisor should review your decision. Do not treat a course exercise as clinical or laboratory authorisation.

## 2. Worked questions and answers

| Question                                      | Model answer                                       |
|-----------------------------------------------|----------------------------------------------------|
| What is a batch manufacturing record for?     | Traceable production and quality evidence          |
| What should happen when a deviation is found? | Record, investigate and escalate it before release |

## 3. Practice MCQs

1. Which action best supports safe and accountable practice?

A. Skip the checklist to save time   B. Record the approved checks and escalate deviations   C. Change results after review   D. Work outside supervision

2. Which item most improves the reliability of a learning decision?

A. A verbal memory only   B. A traceable note with evidence and date   C. An unverified claim   D. No documentation

**Answer key:** 1-B, 2-B. Both answers prioritise documented evidence, approved processes and appropriate escalation.

## 4. My applied notes

| Prompt                                                                | Your response |
|-----------------------------------------------------------------------|---------------|
| The key safety, ethics or quality checkpoint I will use               |               |
| A question I will bring to a mentor or industry expert                |               |
| How this learning applies to an internship, project or placement role |               |
